**Tips for Parents of Infants (0-12 months)**

**CRYING AND FUSSING**
Babies cry and fuss for a variety of reasons – hunger, sleepiness, need for a diaper change. Sometimes for no apparent reason at all. They need to be held and cuddled and to hear your gentle voice to help them feel safe and secure.

**TRY …**
- Checking to see if baby’s diaper needs to be changed, offering a bottle or breast to feed them, or just picking them up, cuddling and talking sweetly to them.
- Wearing baby in a sling or carrier, taking a walk outside or car ride.
- Giving baby a pacifier.
- Singing, humming, and cooing, as well as moving (gentle rocking, swinging, walking), which often calms baby down.

**PUTTING EVERYTHING INTO MOUTH**
Child is learning hand-mouth coordination or is teething and needs safe objects to chew on:

**TRY …**
- Putting a damp washcloth into freezer for baby to chew on.
- Child-proofing by removing small, chokeable objects from reach.

**WON’T SLEEP THROUGH THE NIGHT**
Babies double their birth weight by 4-6 months and triple their weight by 1 year, so they have to eat frequently. Some babies may start sleeping through the night around 4 months. Many do not.

**TRY …**
- Sleeping when the baby sleeps.
- Taking turns with your partner or family member feeding your baby.
- Leaving the room to take a short break – take deep breaths.
- Feeding and soothing baby.

**WON’T STOP CRYING NO MATTER WHAT YOU TRY**

**TRY …**
- Turning on children’s music with singing or ocean/water sounds.
- Placing baby safely in a crib without any blankets or pillows.
- Getting a glass of water, walking around, singing to yourself, making long exhales slowly – this helps your nervous system stay calm.
- Taking turns being with the baby with your partner or family member.
- Driving in the car with baby in a secure car seat.

**THROWING THINGS ON THE GROUND**
It is very common and normal for an older infant to throw things on the ground every 2.5 seconds on purpose. This is how your child learns about gravity and cause and effect. Children enjoy the sound falling objects make.

**TRY …**
- Distracting baby – stop the drop game by using safe tethers or rings that can’t wrap around a child’s neck.

**REMEMBER**
- Babies don’t spoil when held. Denying a baby food, touch, or attention is harmful to their development.
- Shaking, hitting, or tossing a baby is harmful.
- Understand the harms of spanking and sign the pledge today.
Dear Parents,

Did you know that –

• Spanking **shrinks brains.**

  Harvard Medical School found that kids who are spanked just once a month had **14-19% smaller brains in the decision-making area.**¹ These were children who remembered being spanked at least 12 times a year and once with a belt, paddle or brush, but were not injured or spanked in anger.

• **1,574 studies found that spanking is harmful.**

• Even ‘everyday spanking’ is **consistently associated with:**
  
  – More aggression
  – More fighting
  – More mental health problems
  – More negative relationships with parents
  – Lower cognitive ability
  – Lower self-esteem
  – Lower self-control

• **Spanking lowers IQ.**

  The University of New Hampshire found that American children who are spanked at ages 2-4 have **5 less IQ points** than non-spanked children, even years later. Children spanked at ages 5-9 have **2.8 less IQ points.**²

**FREQUENTLY ASKED QUESTIONS**

• **Does this mean that everyone who was spanked as a child has problems?** No, it means that spanking doesn’t help children learn what we want them to learn. Every time we spank a child, we raise the risk that the child will develop problems.

• **Why is this so?** Spanking focuses on the behavior and misses the underlying need. It might stop a child from doing something in the moment, but the child hasn’t learned how to do things differently. And it can lead to built-up resentment and hostility, and prevent some children from telling about sexual abuse for fear of further punishment.

• **But I was spanked and turned out okay?** Today, we have a tremendous amount of knowledge about how children learn and develop. We know other ways of teaching children that don’t have these risks and harms.
